

SUDARSHAN GOPALAKRISHNA

Amalienstraße 1, Weimar, 99423

📞 176-5577-6800 E-Mail: sudarshangopalakrishna@gmail.com 🌐 portfolio-sudarshan.vercel.app

Education

Bauhaus-Universität Weimar

Master of Science in Computer Science for Digital Media, Current GPA: 1.7

Since October 2023

Weimar, Germany

Alva's Institute of Engineering and Technology

Bachelor of Science in Computer Science and Engineering

August 2015 – June 2019

India

Work Experience

Mphasis

Software Engineer

November 2020 – August 2023

Bangalore, India

- **Backend Development:** Developed and maintained REST APIs using Java and Spring Boot for a large-scale logistics integration project, enabling reliable exchange of real-time shipment and tracking data between two merging enterprise systems.
- **Data Layer & Storage:** Worked with SQL databases for structured shipment and customer records and NoSQL databases for high-volume real-time tracking data, ensuring efficient storage and retrieval across both systems.
- **Tracking ID Standardization:** Designed and implemented a dedicated service-layer standardization module in Spring Boot to detect, validate, and convert heterogeneous tracking ID formats from multiple source systems into a unified internal format, applying separation of concerns and single responsibility principles.
- **CI/CD & Agile Collaboration:** Collaborated in Agile Scrum teams of 10 developers, participated in sprint planning and daily stand-ups, raised pull requests for peer review, and contributed to CI/CD pipelines for automated deployment and production support.

Projects

Real-Time Payment & Fraud Detection Platform — Java, Spring Boot, PostgreSQL, Kafka, RabbitMQ **March 2026**

- **Microservices Architecture:** Designed and implemented a distributed payment platform with 8 independent Spring Boot microservices following the Database-per-Service pattern, with centralized encrypted configuration via Spring Cloud Config Server and inter-service communication via OpenFeign REST clients.
- **Fraud Detection Pipeline:** Architected a real-time fraud detection pipeline combining rule-based checks (velocity and account-age thresholds) with an ML risk scoring service built in Python FastAPI and scikit-learn, enabling automated transaction decisions at the time of payment.
- **Event-Driven Architecture:** Implemented asynchronous event streaming with Apache Kafka for domain event broadcasting across services (transfer-initiated, fraud-check-completed, payment-processed) and RabbitMQ for point-to-point messaging (transfer status updates), ensuring loose coupling and reliable communication.
- **CQRS Read Model:** Implemented the Command Query Responsibility Segregation pattern via a dedicated query-service that consumes all Kafka topics and maintains a denormalized transfer view in PostgreSQL, enabling fast, independent reads without impacting write-side services.
- **Security & Configuration:** Secured all sensitive configuration using Spring Cloud Config symmetric encryption, storing only encrypted cipher values in GitHub while keeping the encryption key strictly local, ensuring no secrets are exposed in version control.

Skills

Programming Languages: Java, Python, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks: Spring Boot, Angular, FastAPI

Databases: PostgreSQL, MySQL, MongoDB

Development Tools: GitLab, IntelliJ IDEA, Atlassian Suite (JIRA, Confluence), Git

DevOps & Cloud: Docker, Kubernetes, AWS, Jenkins, Maven, Gradle

Languages

German: B1

English: C1
